

## Commercial and Industrial Energy Efficiency

### Refrigeration Systems

#### Program Description

Our **Commercial and Industrial Energy Efficiency Program** is part of LES' Sustainable Energy Program. Customers taking advantage of this program will **save money, help reduce the need for more expensive energy** during peak periods of the year and ultimately **help delay the necessity to build additional, high-cost power plants**.

The **Refrigeration Systems Program** is designed for customers that want to retrofit an existing system or install a new high efficiency system. This program is intended to help offset the cost to implement the recommended energy efficiency measure.

#### Application Process

- Before beginning a project, submit an online **Pre-authorization Form** to request funds for your project. LES will notify you regarding the availability of funds and, if funds are available, will provide you with a confirmation number.
- **Within 90 days following confirmation**, submit a **Reimbursement Form**, and a copy of the sales receipt itemizing:
  - New equipment/services purchased
  - Cost
  - Size
  - Purchase date
  - Type
  - Make
  - Model
- Please allow two to four weeks to receive reimbursement. Submitting forms with incomplete information will delay payment processing.

#### SEP Incentive Calculation Formula

- Incentive amount will be calculated by LES staff.
- **ALL** connected equipment that is present after the project is complete will be considered as part of the final load. No equipment will be considered as strictly "back-up".
- Incentive will only be available to customers with LES account balances that are not past due.
- Incentive may not exceed 50% of the final purchase price. Final purchase price is determined after all contractor, distributor and/or manufacturer warranty adjustments, discounts, reimbursements, rebates, incentives and gift certificates are deducted.
- Maximum combined incentive of \$100,000 per customer per year for all portions of the Sustainable Energy Program.
- Peak demand period occurs June-September, Monday through Friday, 2-8 p.m.
- Downsizing equipment does not qualify.

#### Program Guidelines

- This program applies to both new construction and existing buildings.

- For the sake of calculating the SEP incentive, all connected equipment that is present after the project is complete will be considered as part of the “post project” load.
- LES reserves the right to conduct pre and post inspections.
- LES is making this program available for the benefit of its customers and the program is in no way intended to create a property right or interest in any participating contractor, seller or other third-party.
- All authorizations under the program are based upon compliance with Program Guidelines within the sole discretion of LES.
- Refer to the “**Commercial and Industrial Energy Efficiency – General Terms and Conditions**” for more information pertaining to this portion of the program.
